KALUNDBORG

The island of Samsøe and  
the Municipality of Skive  
cooperate to promote Danish  
environmental and climate  
knowledge. Both Samsøe  
and Skive are leading actors  
within the field of renewable  
energy development.

# WELCOME ABOARD THE ENERGY SAFARI

**As a guest on the Energy Safari** we offer you a coherent programme focusing on good energy and environment stories, told in a different way.

You get an insight into the achieved Danish experiences, and during the trip we challenge your views and inspire you to new solutions through active participation.

Your visit is tailor-made to your needs and requirements.

In various workshops, you can work on solutions to your own challenges. The solutions can be presented and utilised when you return home.

Furthermore you will see beautiful landscapes and enjoy local hospitality and organically produced food.

## During your customised programme you:

- Visit demonstration plants
- Learn about processes and local experiences
- Participate in workshops, where we develop climate and energy strategies
- Learn about climate investments and how to make them profitable
- Meet with local people working behind the scenes
- Learn from 30 years of experience in development of municipal energy efficiency
- Learn how a municipality converts to sustainable energy

**Samsøe Energy Academy is meeting point** for sustainable energy development. The story of how a small island community over a period of 10 years, succeeds in becoming 100 per cent self-sufficient in energy has led to great international attention and has put the island on the world map.

**For more than 30 years Skive Municipality** has been dealing with climate and environmental issues. The municipality has chosen an economic approach and has been able to generate 40 per cent profit on investments in sustainable energy. The new town hall symbolises the municipal effort and shows a variety of solutions designed to save energy. Skive Municipality is designated as one of Denmark's ecocities. The overall goal is to become CO<sub>2</sub>-neutral and self-sufficient in year 2029.
